

Environmental Policy

Brightplus is committed to protecting the environment and continuously improving its environmental performance as an integral part of its Integrated Management System in accordance with ISO 14001:2026.

We recognise that our operations, products, and services have environmental impacts across their lifecycle, and we integrate environmental responsibility into our business decisions and processes.

We are committed to:

- protecting the environment, including prevention of pollution and minimisation of adverse impacts on air, water, soil, and biodiversity
- fulfilling applicable environmental compliance obligations, including legal requirements and other obligations relevant to our activities
- continually improving the Environmental Management System to enhance environmental performance

To achieve these commitments, we:

- Identify, assess, and manage environmental aspects associated with our operations, products, and services
- Promote sustainable use of resources, including energy efficiency, responsible raw material use, waste reduction, and material circularity
- Integrate environmental considerations into product development, sourcing, supply chain management, and operational processes
- Work with suppliers and partners to support responsible sourcing and reduce environmental impacts across the value chain
- Monitor environmental performance and use data to support decision-making and continual improvement

This Environmental Policy provides a framework for setting environmental objectives and is implemented across all relevant functions of the organisation.

The Policy is communicated to all employees, contractors, and relevant external partners, and is made available to interested parties online at Brightplus's internet page.

The Environmental Policy is reviewed annually during management review to ensure its continued suitability and alignment with the company's strategic direction.
